Demo of DMP OPIDoR v4

Coming up on the 9th of April

Plan creation steps : context, language, template

Funded project's information import

ORCID and/or ROR identifiers retrieval

Guidance selection

Controlled vocabularies selection

Customized data center or platform service request

Plan creation steps: context, language, template

Create your plan in 3 steps

1

Context selection
(For a research project)

2

Language selection
(English (UK))

3

Template selection

Select the context in which you are developing your data management plan

For a research project

You are leading or participating in a research project, you are carrying out a research activity, you are preparing a doctorate.

For a research entity

You administer a data analysis or processing platform, a bioinformatics platform, a research infrastructure, an observatory, a research unit, a laboratory.

1

Choix du contexte
(Pour un projet de recherche)

2

Choix de la langue
(English (UK))

3

Choix du modèle

Sélectionnez la langue du plan

Français

Le modèle sera en français

English (GB)

Le modèle sera en anglais

[Retour à l'étape précédente](#)

1

Context selection
(For a research project)

2

Language selection
(English (UK))

3

Template selection

Choose a DMP template

Preferred templates are those that facilitate data entry and re-use, and enable you to benefit from all OPIDoR DMP functionalities.
They are identified by the icon :

Common template proposed by DMP OPIDoR

 Science Europe: structured template

Template proposed by your organization (CNRS)

 DMP CNRS (english)

Templates from others organizations (EU) or funders (UK)

Begin typing to see a list of suggestions

Funded project's information import

The screenshot shows the 'DMP's Plan' interface with a dark blue header bar containing icons for General information, Write Plan, Contributors, Budget, Share, Request feedback, and Download.

DMP's Plan

Click here if you have a funded project

If your project is financed by one of the funders on the list, you can automatically retrieve the administrative information you entered when applying for a grant.

Please select a funder

French National Research Agency (ANR)

European Commission

Project Details

Click here if you have a funded project

If your project is financed by one of the funders on the list, you can automatically retrieve the administrative information you entered when applying for a grant.

Please select a funder

European Commission

Then Select project acronym, title or ID

GOIT - Go IT! [101070660]
PERAMEDIC - Personalised Adaptive Medicine [101130241]
ECS - European Citizen Science [101058509]
ARTS - Precision tissue biobanking made easy [101082300]
SWEifesci - Presidency Conference on the Future of Life Sciences [101127811]
Field-SEER - Field Sensors with Exceptional Energy Resolution [101097313]
RAND-COMB-DESIGN - Random Combinatorial Designs [101106032]
NEO - Next Generation Molecular Data Storage [101115317]

Mésocentre Clermont Auvergne : [https://cat.opidr.fr/index.php/Mésocentre_Clermont_Auvergne](https://cat.opidr.fr/index.php/M%C3%A9socentre_Clermont_Auvergne)

Request for storage space from Mésocentre Clermont Auvergne

Add an element

Mésocentre Clermont Auvergne backup policy

Only storage spaces in "project" mode are replicated on several servers. The number of replicates is defined with the project manager and is a maximum of 3. The replicates are all physically located in the same datacentre. Data versioning is possible using the S3 API. The user space on the compute cluster (\$HOME) is an unsaved workspace. User support is done through the Jira ticket management system. Documentation is

Open APIs

maDMP OPIDoR API 1.0 OAS 3.0

/api-docs/v1/swagger.json

Please use the /authenticate route before using the API. You can paste the generated token in the prompt displayed by clicking on the "Authorize" button

Contact DMP OPIDoR support staff

MIT license

Authorize 

Authentication

POST

/api/v1/authenticate

Request an access token to be then authorized to use the API to explore DMPs that you own or are shared with you. The access_token value has to be entered in the above green "Authorize" form

Plans

GET

/api/v1/madmp/plans/{id} Returns a user's plan as JSON in the OPIDoR Standard (Science Europe compliant and structured information) or RDA DMP Common Standard compliant format

GET

/api/v1/madmp/plans/research_outputs/{uuid} Returns a user's plan for a given research output as JSON document, in a OPIDoR standard or RDA DMP Common Standard compliant format

POST

/api/v1/madmp/plans/import Allows for the import and creation of a new plan based on a OPIDoR standard or RDA DMP Common Standard, format-compliant DMP

MadmpFragments

GET

/api/v1/madmp/fragments/{id} Returns a fragment of information as JSON using a madmp fragment identifier

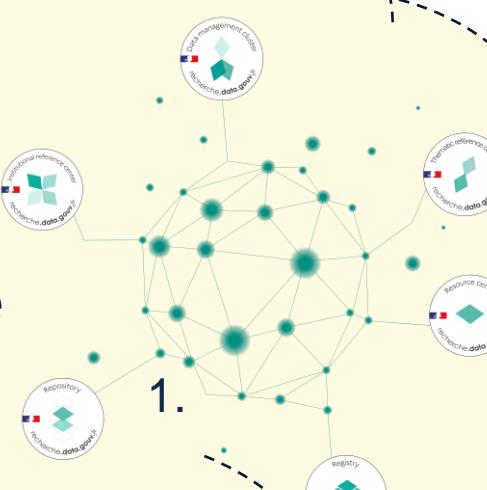

PUT

/api/v1/madmp/fragments/{id} Allows for the update of a fragment

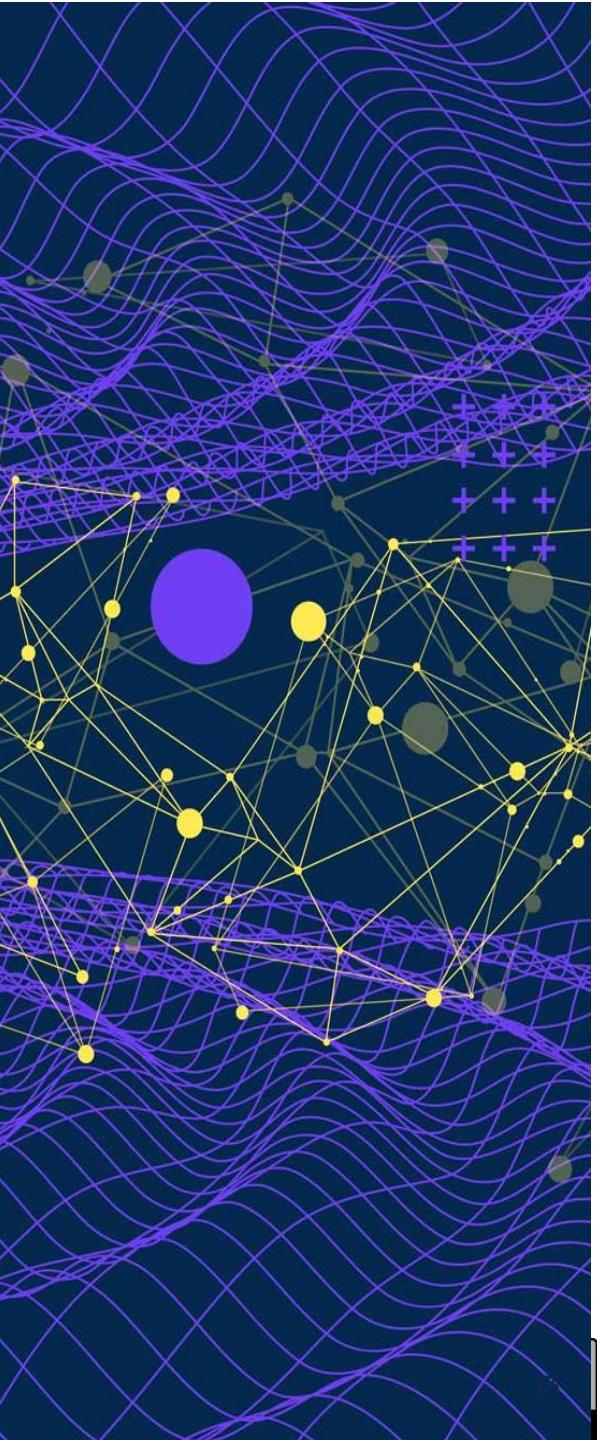

Current thinking and outlook

- Disciplinary/thematic profiles
- Models for other research output's types: software, services, samples, ...
- API connectors: further integration in the research workflow
- DMP as an inventory of research outputs
- DMP PID
- Entity DMP <-> Project DMP
